

Northstar Security Incident Response Playbook

Severity Levels

Item	Details
SEV-1	Confirmed compromise of production systems or widespread data exposure.
SEV-2	Credible security incident affecting a limited number of systems or users.
SEV-3	Suspicious activity requiring investigation but with no confirmed compromise.

First Response

Do not delete suspicious files or logs. Preserve available evidence. Disconnect an affected endpoint from the network if instructed by Security Operations. Do not communicate incident details externally without authorization.

Credential Exposure

If credentials are suspected to be exposed, immediately notify Security Operations and reset the affected credentials using an approved device. Do not reuse the exposed password.

Reporting

Security incidents should be reported through the internal Security Operations channel. Include the affected system, approximate time of discovery, observed symptoms, and actions already taken.
